Exp No: 15

24/9/26

Aim: To analyze different types of web logs using the webalizer log analysis tool and generate web traffic reports.

Result:

Thus, the web server log files were analyzed using the webalizer tool, and web Traffic reports containing monthly statistics, host, user agent and other traffic details were successfully generated.

EXP 15

AIM

To analyze different types of web logs using the Webalizer log analysis tool and generate web traffic reports.

Procedure

Step 1: Run Webalizer

1. Download and extract the Webalizer executable (webalizer.exe) on Windows.
2. Place the executable in a dedicated working folder (e.g., C:\webalizer).

Step 2: Input Web Log File

1. Obtain or download a sample web server access log file (e.g., access.log from Apache, Nginx, or IIS).
2. Move the log file into the same directory as webalizer.exe or update the webalizer.conf configuration file to point to the input log location:

```
LogFile access.log
OutputDir ./output
```

Step 3: Run Webalizer

1. Open Command Prompt (cmd) and navigate to the Webalizer directory:

```
DOS
cd C:\webalizer
```

2. Execute Webalizer specifying the log file:

```
DOS
webalizer.exe access.log
```

3. Open the generated index.html file in any web browser to view the generated traffic report.
