EXP · 5

PACKET CAPTURE USING WIRESHARK

Aim

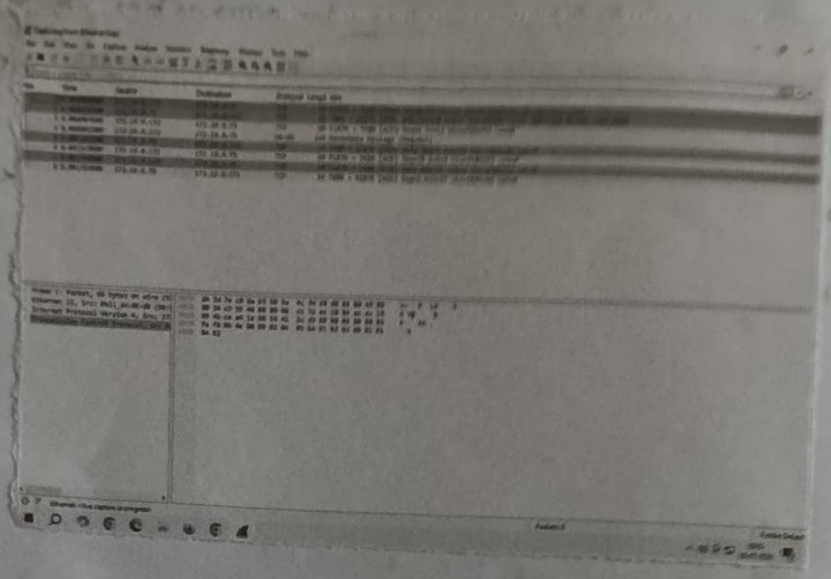

To capture, filter, inspect and analyze network packets using the wireshark packet analyzer.

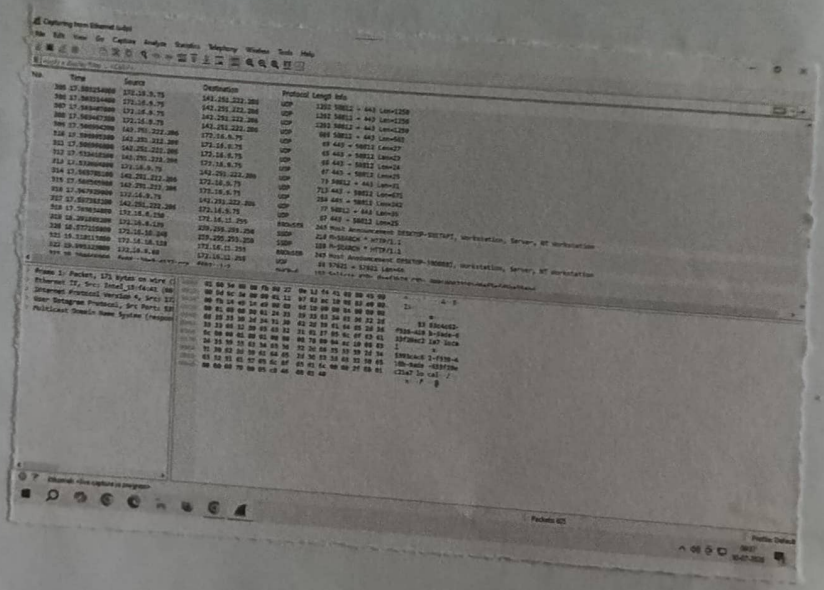

Algorithm

1. Open wireshark
2. Select the active network interface
3. Configure capture to stop after 100 packets
4. Start packet capture
5. Apply display filters
6. Inspect packet details and views the flow graph
7. Save the captured packets

Procedure:

* Launch wireshark and select the active network interface
* Go to capture → options and set stop capture 100 packets
* click start to begin packets capture.
* Apply the following display filters:
  - TCP/UDP : tcp || udp
  - ARP : arp
  - DNS : dns
  - HTTPS : http
  - DHCP : bootp.

* Inspect the filtered packets in the packets list, Packet Details & Packet Bytes panes.

* Save the captured file for future analysis

Result:

Successfully, captured 100 network packets, applied display filters for TCP, UDP, ARP, DNS, HTTP, IP, ICMP and DHCP and analyzed the packet details using wireshark.
